Advanced in vitro exposure systems

VITROCELL® VC 1 SMOKING MACHINE
The manual smoking machine VC 1 is specifically designed and manufactured to fulfill the requirements of in vitro experiments. Suitable for conventional and electronic cigarettes.

Optimal when researching side- and mainstream smoke, it offers significant advantages over other commercial smoking machines.

**Objective**

The manual smoking machine VC 1 is specifically designed and manufactured to fulfill the requirements of in vitro experiments. Suitable for conventional and electronic cigarettes.

Optimal when researching side- and mainstream smoke, it offers significant advantages over other commercial smoking machines.

**Generation of smoke with the shortest distance to cell cultures**

For the success of an experiment with mainstream tobacco smoke it is vital that the distance between the smoke generation (cigarette holders) and the VITROCELL® cell exposure system is as short as possible to avoid aging and to guarantee authentic smoke-composition.

**Open and flexible system / incorporation of other analytical tools**

The VC 1 machine is designed to allow easy access to all tubes, filters and the pumping system. Additional analytical equipment relevant to the experiment can be easily and individually installed.

**Freely programmable parameters**

The computer system facilitates highly flexible programming of the smoking process. All parameters of the smoking process like puff duration, puff volume, puff frequency and exhaust duration can be defined according to experiment requirements.

**High flexibility for all smoking regimes**

ISO, Health Canada Intense, Massachusetts, Square and Human Puff Profile regimes (option) can be smoked. An upgrade for Shisha smoking is available.

**Options for e-cigarettes**

- square puff profiles
- higher puff volumes
- button actuator
Statistics
Smoking process data are logged into an Excel® sheet for further processing.

Machine dimensions are suitable for constrained lab workplaces
The VC 1 machine is divided into 2 major components: computer, control box with smoking platform.

All components are easy to clean
In particular the work with unfiltered mainstream smoke demands frequent cleaning of all machine parts which come into contact with smoke. Cleaning must take place after each experiment to avoid any residual product contamination with subsequent experiments. Easy access to all component parts ensures quick and efficient cleaning.

Human puff profile capability
This optional feature offers the possibility to upload human puff-profile data registered by Smoking Puff Analyzers to the machine controls.

Compatibility with existing lab systems
The VC 1 machine can be integrated with and connected to other lab systems, e.g. analytical systems.

Compliance with ISO 3308
The VC 1 machine meets the requirements of ISO 3308, which assures compatibility with data generated for quality assurance purposes on other smoking machines.

Compliance with Health Canada / CRM 81 Conditions
The VC 1 machine meets the requirements of 55 ml/30 sec puff frequency for smoking combustion as well as electronic cigarettes.

Quality
The VC 1 machine is built to the highest standards using reliable and durable components. Precision of the process is ensured by a linear motor drive for the piston.

Service
All VC 1 machines are specifically designed to be exceptionally service-friendly and have a secure internet-based remote servicing module.

Software Control
Input is communicated via PC with flat screen monitor or laptop (part of delivery).

Scalability
Pooling to multiple machines possible.

**VITROCELL® Holder System for e-cigarettes**

Secure and tight connection of any puff-actuated device to Smoking Machine

New designs of ENDS (Electronic Nicotine Delivery Systems) products lead to a large variety of different shapes which make the insertion into conventional holders with labyrinth seals impossible.

VITROCELL® has developed a new holder system which is flexible to adjust to different shapes. It is compatible with all VITROCELL® Smoking Machines & Robots. In most cases the exchange of the inner sealing is sufficient to adjust for a specific shape.

---

**VITROCELL® Vapestarter**

For automatic button activation of e-cigarettes

This automated solution is designed to press the button in a precise manner and synchronized with the puff regime. The trigger function is controlled by the software of the smoking machine.

The system consists of an e-cigarette holder and different Vapestarter units which are tailor-made to fit tank products having different diameters as well as square shapes.

---

**Features**

- Integration into software of VC 1, VC 1 S-TYPE, VC 1/7, VC 10® and VC 10® S-TYPE Smoking Machines
- Vapestarters available for all sizes of tank products
- Inclination angle from 0-90°
- Quick-change mechanism for easy exchange of test products
State of the art controls for highest precision

Software & Controls

The operation is controlled by Beckhoff software in conjunction with Microsoft Windows 10®. This setup offers extensive possibilities for integration with common Microsoft Office® applications and the exchange of data with Excel®-sheets.

Smoking parameters

The following parameters can be adjusted according to the needs of the experiment:

- Puff and exhaust duration
- Puff frequency
- Puff volume
- Puff profile
- Flow rate
- Clearing puff number
- Puff duration hold time
- Butt length via sensor

Human Puff Profiles
For Smoking Machine VC 1 / VC 1 S-TYPE and
Smoking Robots VC 10\textsuperscript{®} / VC 10\textsuperscript{®} S-TYPE

Direct Reading from Puff Analyzer Data Files

Human puff profile capability
This optional feature for the VC 1 and VC 1 S-TYPE smoking machine, VC 10\textsuperscript{®} and VC 10\textsuperscript{®} S-TYPE smoking robots offers the possibility to feed data of human puff profiles registered by Smoking Puff Analyzers to the machine controls.

Puff time – precision of replication *

Inter puff time – precision of replication *

Puff volume – precision of replication *

Flow versus time – precision of replication *

*) Data from smoker compared with 2 channels of VC 10\textsuperscript{®} smoking robot (VC 1 is using same technology).

About VITROCELL®

VITROCELL® exclusively concentrates on the developing, producing, installing, training and servicing of advanced in vitro exposure systems.

The VITROCELL® Systems’ team is driven by their vision for new in-vitro standards through state-of-the-art technology, highly qualified workmanship and absolute client dedication. VITROCELL® has successfully collaborated with clients from leading research institutes, contract research organizations, regulatory authorities or industrial laboratories across the world. Working with our team experts, all modules have been tailored to create durable and complete turnkey-systems for in vitro inhalation toxicology. Gases, environmental atmospheres, nano particles and complex mixtures are analyzed on lung cells at the air/liquid interface using these systems. VITROCELL® technologies are also applicable to solutions for skin research.

Over a decade of devotion to research in this specific field has given our team of design & precision manufacturing specialists the opportunity to mentor highly diversified and complex projects from conception to completion. We strive to become a constructive member of each research team, providing support when it is needed, advice when it is required and modules of the highest quality, which are even polished by hand before leaving here to be integrated into your workspace. Every piece of our German engineered equipment is manufactured to the highest of standards – yours.
