VITROCELL<sup>®</sup> SC 3 Exposure Module for Suspension Cells

# VITROCELL® SC 3 Exposure Module for Suspension Cells

For 3 Petri dishes (35 mm size)

The VITROCELL® SC 3 module system has been specifically designed and engineered to facilitate the research of suspension cells direct exposure to airborne substances such as gases, complex mixtures, nanoparticles and fibers. It has a unique magnetic stirring capability.

Normally two modules are required: one module for exposure to the substances and a second module for clean air control. The capacity can be easily increased by adding more modules. Each module can receive a different dose concentration, so that a complete dose/response profile can be obtained in one experiment. The suspension cells are directly exposed in stirred media using controlled flow rates of the aerosol. After exposure, the cultures are further processed.

#### Base module

The modules' casing is made of high-quality stainless steel. It has been specifically designed with 3 compartments for 35 mm Petri dishes. This module is renowned in

scientific circles for its reliability and durability.

35 mm Petri dishes

Controller for magnetic stirrers

#### Aerosol exposure top

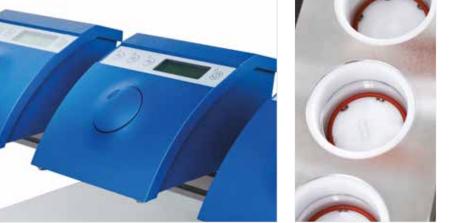

Special sealing and connection mechanisms guarantee a hermetic connection of the base module with the aerosol exposure top.

The inlets are available in stainless steel or stainless steel with unique VITROGLIDE surface treatment for lowest adhesion results. The aerosol inlets are connected to the aerosol generation / dilution system and their respective outlets to the vacuum pump.

#### Features

- $\circ~$  Suitable for Petri dishes (diameter 35 mm)
- Hyperboloid geometry of inlets for optimized particle deposition and distribution
- $\circ~$  Direct flow control for each inlet
- Base module made of stainless steel for maximum durability
- Magnetic stirring capability

# VITROCELL® Exposure Systems for Inhalation Toxicology

Direct Exposure Technology at Air/Liquid Interface

## **VITROCELL® EXPOSURE AT THE AIR/LIQUID INTERFACE**

The exposure of mammalian cells or tissues to airborne substances is frequently performed under submerged conditions. In doing so, the test substances are dosed into the culture media. This procedure results in an undesired interaction of the formerly airborne substances with the media, causing limitations for authentic analysis.

Therefore VITROCELL<sup>®</sup> recommends the air/liquid interface exposure technology.

### **About VITROCELL®**

VITROCELL<sup>®</sup> exclusively concentrates on the developing, producing, installing, training and servicing of advanced *in vitro* exposure systems.

The VITROCELL<sup>®</sup> Systems' team is driven by their vision for new in-vitro standards through state-of-the-art technology, highly qualified workmanship and absolute client dedication. VITROCELL<sup>®</sup> has successfully collaborated with clients from leading research institutes, contract research organizations, regulatory authorities or industrial laboratories across the world. Working with our team experts, all modules have been tailored to create durable and complete turnkey-systems for *in vitro* inhalation toxicology. Gases, environmental atmospheres, nano particles and complex mixtures are analyzed on lung cells at the air/liquid interface using these systems. VITROCELL<sup>®</sup> technologies are also applicable to solutions for skin research.

Over a decade of devotion to research in this specific field has given our team of design & precision manufacturing specialists the opportunity to mentor highly diversified and complex projects **from conception to completion**. We strive to become a constructive member of each research team, providing support when it is needed, advice when it is required and modules of the highest quality, which are even polished by hand before leaving here to be integrated into your workspace. Every piece of our German engineered equipment is manufactured to the highest of standards – yours.
